

### Why SmartConnect?

Minus Forty's SmartConnect leverages the power of IOT to deliver improved business efficiency, enhanced customer service, simplified quality assurance compliance, and better profitability.

### Cloud Based Platform

SmartConnect's cloud-based platform gives you the information you want, whenever and wherever you are in the world, in real time. Including instant notifications and alerts via text or email so you can proactively respond.

### Remote Door Control

SmartConnect allows remote door locking and unlocking capability on merchandisers equipped with Minus Forty's SmartLock.

### Key Data Parameters

It starts with being able to access more data about your merchandiser. You will be able to gather data on several key parameters like:

- Cabinet temperature
- Door opening status
- Evaporator temperature
- Power failures
- Compressor cycles
- Defrost cycles

With SmartConnect you can check current and historical merchandiser alarm conditions such as high temperature, door open, other malfunction alarms and remotely silence alarms.

SmartConnect also features detailed historical temperature reporting.

### Easy Installation

SmartConnect can be factory installed when we build your new merchandiser.

Or, you can retrofit SmartConnect on your existing merchandiser. Installation is easy. The SmartConnect gateway with its built-in cellular modem, simply mounts on the back of the merchandiser and connects to the data port.

**Once you experience SmartConnect you'll wonder how you lived without it.**

Call your Minus Forty Business Development Manager to learn more about the breakthrough technology of SmartConnect.
